Professional Summary

Full-Stack Software Engineer with 3+ years of experience architecting highly reliable, scalable web platforms and APIs, with a strong focus on Node.js, TypeScript, and React. Proven track record of owning features end-to-end—from defining architectural infrastructure (AWS, Terraform) to shipping secure payment integrations (Stripe, Google Wallet). Adept at driving technical discovery and collaborating within fast-paced, distributed teams, bringing a security-first mindset and a deep commitment to producing well-tested, production-ready code for high-impact user experiences.

Key Skills

- **Languages:** TypeScript, JavaScript, Python, Kotlin, Java
- **Backend & APIs:** Node.js, Express, Spring Boot, FastAPI, PostgreSQL, MongoDB, RESTful API Design
- **Frontend:** React, Next.js, Tailwind CSS, Redux
- **Cloud, DevOps & Infra:** AWS (Lambda, S3, Cognito, CloudFront, Amplify), Terraform, Docker, CI/CD (GitHub Actions)
- **Domain Expertise:** Secure Financial Integrations (Stripe, Google Wallet), PSD2 Guidelines, IAM/Least-Privilege Access, Distributed System Observability

Work Experience

Axallant Pvt.Ltd | WA, USA (Remote)

Full-Stack Software Engineer (Jan 2025 – Aug 2025) | *Intern* (Nov 2024 – Jan 2025)

- Architected and deployed serverless cloud infrastructure utilizing AWS Lambda, Cognito, and CloudFront, managed via Terraform to ensure scalable, automated, and repeatable environment provisioning, with CI/CD pipelines through Github Actions.
- Developed robust, scalable backend services using Node.js and Spring Boot, integrating seamlessly with performant React frontend interfaces for a property rental management system.
- Engineered secure financial transaction workflows by integrating Stripe, managing advanced IAM user roles (Admin, Landlord, Tenant) with strict least-privilege access and data handling protocols.

Uprise Digital | Australia (Remote)

Full-Stack Data Engineer (2025 – Present)

- Designed and maintained Propia, a real estate investment analysis platform, utilizing a modern stack encompassing Next.js, Python (FastAPI), and PostgreSQL.

- Engineered robust API services and highly resilient data extraction pipelines (utilizing undetected_chromedriver), scrape.do to aggregate, normalize, and secure large volumes of property data from major portals, and deploying backends in a scalable manner using Railway.

Anime.lk (Contract) | Sri Lanka

Lead Software Engineer & Technical Director (July 2022 – Present)

- Spearheaded the platform redesign and modular Event Management System using Next.js and TypeScript, taking full ownership from technical discovery through to production deployment.
- Integrated the Google Wallet API for secure, high-volume digital ticketing, successfully handling concurrent transaction loads and reducing entry friction at large-scale conventions.
- Developed the [Artist Partner Portal](#) with automated merchandise submission, review workflows, and internal analytics, translating business requirements directly into technical solutions.

Freelance Software Engineer

January 2022 – Present

- **Providence Auto:** Engineered a highly performant Next.js and TypeScript web platform for international vehicle sourcing and importation, managing end-to-end delivery, secure lead-tracking pipelines, and client stakeholder communication, with CI/CD using Github Actions.

Selected Projects

- **Expense Tracker** (https://github.com/seyone22/expense_tracker) – Open-Source Application for managing personal finance. Architected with full MMEX database compatibility and designed in strict alignment with PSD2 financial security guidelines.
- <https://food.seyone.dev> (**Supermarket Price Tracker**) – Built an automated data aggregation engine to track, normalize, and visualize price trends across multiple national supermarket chains, handling large, continuously updating datasets on a modern web dashboard.
- **Cook** (<https://github.com/seyone22/cook>) – Developed a robust application for automated recipe and pantry management, engineering an OCR integration to seamlessly extract and categorize ingredients from images for streamlined household inventory tracking.
- **Catfish** (<https://github.com/seyone22/catfish>) – Engineered an offline voice synthesis and transcription application utilizing OpenAI Whisper, optimizing a custom C++ layer on TensorFlow for high-performance, low-latency processing.

Education

University of Vavuniya, Sri Lanka

B.Sc. Information Technology (GPA: 3.53) | July 2021 – September 2024

- **Awards:** Dean's List Recipient, Faculty Award Recipient, IEEE Xtreme All-Island Rank (2022, 2023).
- **Focus Areas:** Web Development, Optimization, Quality Assurance, and Deployment.
